Subdivision \_\_\_\_\_ Lot # \_\_\_\_\_

Area of Disturbance: \_\_\_\_\_ Acres Proposed Impervious Area: \_\_\_\_\_

In lieu of submitting a formal stormwater management plan for development of this single family dwelling and/or appurtenant structure, I agree to comply with the requirements of the Virginia Stormwater Management Regulations and Chapter 10, of the County Code, and provide pollution prevention and stormwater management measures in order to protect against pollutant discharge from the property. I further agree to comply with additional requirements deemed necessary. Such requirements shall be based on established stormwater management standards and shall represent the minimum practices necessary to provide adequate treatment and control of stormwater runoff resulting from this development.

As a minimum I agree to provide the following prior to beginning any land disturbing activity:

1. A Stormwater Pollution Prevention Plan (SWPPP) containing the content specified by Regulation Section 9VAC25-875-500, which includes a general description of the proposed stormwater management facilities and the mechanism through which the facilities will be operated and maintained after construction is completed, as well as documentation and calculations verifying compliance with the water quality and quantity requirements of the approved plan.
2. A Pollution Prevention Plan (PPP), required by Regulation 9VAC25-875-520, detailing the design, installation, implementation, and maintenance of effective pollution prevention measures to minimize the discharge of pollutants. At a minimum, such measures must be designed, installed, implemented, and maintained to:

- (1) Minimize the discharge of pollutants from equipment and vehicle washing, wheel wash water, and other wash waters. Wash waters must be treated in a sediment basin or alternative control that provides equivalent or better treatment prior to discharge;
- (2) Minimize the exposure of building materials, building products, construction wastes, trash, landscape materials, fertilizers, pesticides, herbicides, detergents, sanitary waste, and other materials present on the site to precipitation and to stormwater; and
- (3) Minimize the discharge of pollutants from spills and leaks and implement chemical spill and leak prevention and response procedures.

The pollution prevention plan shall include effective best management practices to prohibit the following discharges:

- a. Wastewater from washout of concrete, unless managed by an appropriate control;
- b. Wastewater from washout and cleanout of stucco, paint, form release oils, curing compounds, retarders for exposed aggregate finishes, and other construction materials;
- c. Fuels, oils, or other pollutants used in vehicle and equipment operation and maintenance;
- d. Soaps or solvents used in vehicle and equipment washing; and
- e. Discharges from dewatering activities, including discharges from dewatering of trenches and excavations, unless managed by appropriate controls.

By signing below, I agree that all requirements in above plans will be installed and I further understand that failure to comply with such requirements within the reasonable time specified in a documented notice by the York County Building Regulations Department will result in a citation for each day the violation remains uncorrected thereafter and that the penalty for each violation is up to \$32,500.

I hereby grant York County the right to enter upon the subject property periodically for inspections to ensure compliance with the Stormwater Management Ordinance.
