

HOUSING

INTRODUCTION

One factor contributing to York County’s high quality of life and its desirability as a living environment is the quality of its residential development. Market forces play a vital role in the housing sector, but markets do not operate in a vacuum. The County Zoning Ordinance and Zoning Map greatly affect the amount, type, and location of housing that will be built in the future. Such policy decisions must consider the County’s future needs in attempting to strike a balance between market forces and longer-term County goals and objectives. One such goal, which dates back to the 1991 Comprehensive Plan, established a “maximum build-out population” target of 80,000 residents. This figure represents an estimate of the approximate number of residents there would be if all remaining developable residential land were developed at its maximum allowable density. This target was set in response to concerns about growth that began to emerge in the 1980s. In accordance with this goal, the Zoning Ordinance and Map were revised in 1995 to reduce both the amount of land designated for residential development and the allowable residential densities in the County. As a result, the total number of housing units that could potentially be built in the County dropped from 45,300 to 31,500. As part of this Plan update, a build-out analysis was conducted which found that at full build-out, the County would have an estimated population of approximately 83,000. Details about the build-out analysis are discussed later.

HOUSING INVENTORY

Overview

There are approximately 26,500 housing units in York County, most of them owner-occupied and most of them single-family detached. Although single-family detached homes dominate the landscape, the last twenty years have seen a marked increase in single-family attached homes (townhouses, duplexes, quadruplexes, etc.) and multi-family housing. In fact, over a third (36.5%) of the new housing built since 1990 has been of the single-family attached and multi-family variety. On-base military housing – both family housing and barracks – constitutes about 9% of the County’s housing stock.

Average Annual Increase in York County Housing Units

Figure 1

1 The demand for housing in York County has been strong over the past several decades as reflected in fairly
2 steady growth in the housing stock. The past four decades have brought an average of 4,130 new housing
3 units per decade, or 413 per year. As shown in **Figure 1**, home construction was especially strong during the
4 1990s with the addition of more than 5,400 homes but has slowed down since then, adding 4,710 units
5 between 2000 and 2010 and 2,520 between 2010 and 2020. Factors contributing to this slowdown include
6 the national economic recession that began in 2008, the diminishing supply of developable residential land,
7 and the reduction in allowable housing densities that was implemented with the 1995 update of the Zoning
8 Ordinance and Map.

9
10 Although most of the housing in the County is single-family detached, the majority of new homes built in
11 recent years have been multi-family or single-family attached – apartments, townhouses, duplexes, etc. (see
12 **Figure 2**), and a quarter of these are age-restricted units for seniors. Single-family detached homes represent
13 a little more than one third of the housing units built between 2010 and 2020.
14

York County Housing Construction, 2010-2020

Figure 2

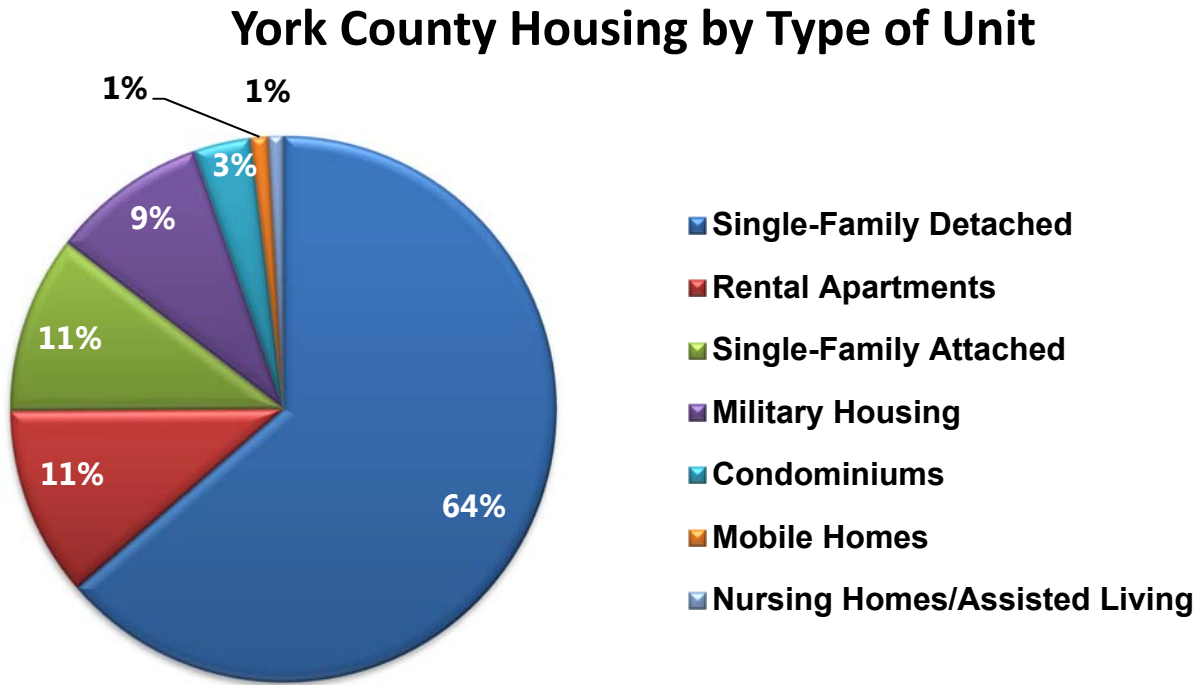

Housing Types

15
16
17
18 As shown in **Figure 3**, single-family detached homes represent almost two-thirds of the County's total
19 housing stock. Rental apartments constitute 11% of all units, and single-family attached homes represent
20 another 11%. A little more than 3% of the County's housing units are condominiums, defined as a building
21 or group of buildings in which units are owned individually and the structure, common areas, and facilities
22 are owned by all the owners on a proportional, undivided basis.¹ In addition, there are thirteen mobile home
23 parks in the County with a combined total of approximately 330 mobile homes. Nursing homes and assisted
24 living facilities make up about 1% of the County's housing.

25
26
27
28 Military housing at The Landings at Langley, the U.S. Naval Weapons Station Yorktown, the U.S. Coast Guard
29 Training Center Yorktown, and Camp Peary is treated here as a separate category of housing. Together,
30 these four federal facilities account for a little more than 2,500 units, or 9% of the County's housing stock.

¹ Rather than a specific building style, condominiums represent a legal form of real estate ownership.

1 This housing includes both family housing – mostly of the single-family attached variety but detached units
2 also – and group quarters (barracks), which account for about 40% of the County’s military housing.
3

4
5 **Figure 3**
6

7 In 2003, the Board of Supervisors amended the Zoning Ordinance to provide opportunities for a range of
8 age-restricted housing for seniors, including independent living, congregate care, assisted living, and contin-
9 uing care retirement communities. Any age-restricted housing development requires approval from the
10 Board of Supervisors. Since then, the Board has approved fifteen senior housing projects with a combined
11 total of almost 2,000 units. Most of these are apartment units, but they also include duplexes, quadruplexes,
12 and single-family detached units. Independent living units constitute a little more than half of the approved
13 senior housing units. To date, 724 units have been built while the remainder are either under construction
14 or in the development review process. In addition, two housing developments with a combined total of 248
15 units have been built that are not specifically age-restricted but are targeted mainly to so-called “active
16 seniors” age 55 and older.
17

18 **Geographic Distribution**

19 Although the upper County represents slightly more than half of the County’s land area, the housing stock
20 is overwhelmingly concentrated in the lower County, which is home to almost four-fifths of the housing
21 units. In recent years, however, as the availability of developable land in the lower County has diminished,
22 the upper County has attracted a growing share of the County’s home construction. Nearly half (49%) of
23 the housing units built between 2010 and 2020 were in the upper County, increasing the upper County’s
24 share of the County’s housing stock from 20% to 22%.
25
26

27 **Age and Size**

28 York County’s housing stock is relatively young, with almost a quarter of the housing units (22.7%) built
29 within the past twenty years. By comparison, 19.7% of the housing in the Virginia Beach metro area and
30 21.6% in the state of Virginia are twenty years old or less. According to the Census Bureau’s American
31

1 Community Survey, the median year of construction for housing in the County is 1991, meaning half the
2 housing stock is roughly thirty years old or less and the other half is older than thirty years.
3

4 On average, homes and residential lots in the County tend to be larger than in surrounding jurisdictions.
5 According to the Census Bureau, the median number of rooms per housing unit in the County is
6 approximately 6.4, greater than the 5.9-room average for the Virginia Beach metropolitan area and 6.0 the
7 for the state as a whole. In part, this likely reflects the preponderance of single-family detached homes in
8 the County relative to other localities.
9

10 The average lot size for single-family detached homes in the County is roughly three-quarters of an acre,
11 according to York County land records. As shown in **Figure 4** below, most single-family detached house lots
12 – 62% – are a half-acre or less in size. In general, allowable lot sizes in the County have increased over time
13 as a result of changes to the Zoning Ordinance. The County’s original 1957 Zoning Ordinance allowed lots as
14 small as 7,500 square feet (0.17 acre) in the Single-Family Residential (R-1) district and 20,000 square feet
15 (0.46 acre) in the Rural Residential district. Under the current ordinance, minimum lot sizes for conventional
16 subdivisions range from 13,500 square feet (0.31 acre) to one acre. In areas where public utilities are not
17 available, the minimum lot size increases to 1.5 acres (where only public water is available) or 2.0 acres
18 (where neither public water nor sewer is available). However, in areas where public utilities are available,
19 the open space (i.e., cluster) subdivision provisions permit smaller lots than are allowed in conventional
20 subdivisions but with no increase in density. Smaller lots and increased density can also be permitted in
21 Planned Developments (e.g., Arbordale, Coventry, the Villages of Kiln Creek, Whittaker’s Mill), each of which
22 must be individually approved by the Board of Supervisors.
23

Figure 4

24
25
26
27
28
29

1 **Occupancy**

2
3 The vacancy rate in a given housing market is the proportion of unoccupied housing units that are for sale
4 or rent and units that have been sold or rented but are not yet occupied. In an ideal market, some housing
5 units should be vacant to allow adequate opportunities for households seeking new residences. Moreover,
6 to operate efficiently, vacancy rates must run a fine line between an overbuilt market and an underbuilt
7 market. The implications of an overbuilt market include mounting mortgage risks for lenders, investors, and
8 developers, whereas an underbuilt market tends to restrict residential mobility and drive up housing prices
9 as purchasers bid up the price of available units. The vacancy rate is approximately 1.4% for homeowner
10 housing and 11.1% for rental housing in the County, 1.6% and 5.6% respectively in the state of Virginia, and
11 1.7% and 6.0% respectively in the nation as a whole
12

13 **Tenure**

14
15 York County has a high rate of home ownership, but there is still a significant amount of rental housing for
16 those who either cannot afford the costs of home ownership or choose to rent. According to the Census
17 Bureau’s American Community Survey for 2014-2018, rental housing constitutes more than a quarter
18 (28.2%, or 6,941 units) of the County’s occupied housing stock. Although commonly associated with
19 apartments, rental housing is not limited to multi-family housing. In fact, almost a third of the single-family
20 detached homes in the County (29.8%) are occupied by renters, while apartment complexes (listed below in
21 **Table 1**) constitute less than half of the County’s rental housing.

Table 1

23 **Financial Characteristics**

24
25
26 At \$324,400, according to the U.S. Census Bureau, the relatively high median value of owner-occupied
27 housing in York County is a reflection of several factors, including the high value of single-family detached
28 homes relative to townhouses, condos, etc., the quality of home construction, and the County’s desirability
29 as a place to live and raise a family. York ranks third on the Peninsula, behind James City County and

1 Poquoson, in median house value, and is well above the Virginia Beach metro area and the state as a whole.
 2 For renter-occupied housing, York County leads the Peninsula with a median gross monthly rent of \$1,456.

JURISDICTION	MEDIAN HOUSE VALUE	MEDIAN GROSS MONTHLY RENT
Hampton	\$186,400	\$1,100
James City County	\$339,600	\$1,248
Newport News	\$193,100	\$1,008
Poquoson	\$325,000	\$1,208
Williamsburg	\$300,100	\$1,149
York County	\$324,400	\$1,456
Virginia Beach MSA	\$242,800	\$1,156
Virginia	\$264,900	\$1,202

Source: U.S. Census Bureau American Community Survey, 2014-2018

Table 2

3
 4 Recent home sale figures essentially mirror the house value data for York County. The average (mean)
 5 purchase price of a home sold in York County between January 2, 2019 and March 10, 2020 was \$324,200 –
 6 almost identical to the Census Bureau’s median house value figure. For single-family detached homes, the
 7 average purchase price was somewhat higher – \$357,200 – while townhouses and duplexes had average
 8 purchase prices of \$243,800 and \$187,600 respectively. The average price of a condominium was \$236,400.
 9 These figures include both new homes and resales.

10
 11 Housing affordability is measured by the ratio of housing cost to household income. The general rule is that
 12 no household should have to spend more than 30% of its annual gross income on housing. According to the
 13 Census Bureau’s American Community Survey data (2014-2018), 28.5% of the households in York County
 14 were paying more than 30%. Not surprisingly, as shown in **Figure 5**, the more affluent localities tend to have
 15 the fewest households, proportionally, in this category. Also not surprising is the fact that housing
 16 affordability is more of a problem for renters than homeowners. In York County, 45.5% of renters are
 17 spending more than 30% of their incomes on housing, while only 15.5% of homeowners fall into this
 18 category. The same pattern exists across the Peninsula and statewide.
 19

**Percentage of Households Spending More Than 30% of Their
 Income on Housing**

Figure 5

HOUSING PROGRAMS AND INITIATIVES

There are a variety of federal, state, and local programs and initiatives, which are described below, that are designed to help meet the housing needs of low- and moderate-income residents. These include County zoning incentives, federal tax incentives, and a range of programs administered by the Housing and Neighborhood Revitalization Division of the County’s Department of Community Services that offer rental subsidies and housing rehabilitation loans and grants.

Affordable Housing Incentive Provisions (AHIP)

York County encourages the construction of more moderately priced housing through the *Affordable Housing Incentive Provisions (AHIP)*, which are set forth in the Planned Development regulations of the Zoning Ordinance. This encouragement comes in the form of a reduction or elimination of otherwise applicable open space requirements. In exchange, these provisions require either modular dwelling units or other approved single-family detached dwelling units and establish a maximum unit size, all with the objective of promoting affordability. Five housing developments, with a combined total of 406 lots, have been approved by the Board of Supervisors under the Affordable Housing Incentive Provisions since their inception in 1986. Summary data for these five subdivisions appears in **Table 3**.

SUBDIVISIONS APPROVED UNDER THE AFFORDABLE HOUSING INCENTIVE PROVISIONS						
Name	Bruton Glen	Endview Woods	Quail Hollow Section 3	Sunset Meadows	Willow Lakes	
					(Detached)	(Duplex)
Approval Date	5/1/96	11/6/96	12/7/89	10/16/07	11/15/95	11/15/95
Lots	87	33	16	22	99	148
Minimum Lot Size	4,356	5,227	6,970	4,793	4,356	3,485
Maximum Lot Size	19,602	17,424	27,878	8,687	7,405	6,534
Average Lot Size	7,100	7,604	9,612	6,049	5,056	3,975
2022 Assessed Value						
Minimum	\$214,600	\$209,300	\$174,200	\$247,700	\$207,500	\$201,200
Maximum	\$284,200	\$284,400	\$292,800	\$287,100	\$285,700	\$273,400
Average	\$239,709	\$246,758	\$231,381	\$260,514	\$252,875	\$244,109
<i>Source: York County Planning Division</i>						

Table 3

All of these subdivisions were developed more than ten years ago. Home values in these AHIP developments have risen over the years, as they have throughout the County, but most of them have retained their affordability relative to the median home sale price in the County.

Community Development Block Grant (CDBG)

The Community Development Block Grant (CDBG) program provides federal funding to eligible local governments for planning and implementing projects that address critical community development needs, such as housing, infrastructure, and economic development. In recent years, these federal funds, combined with local matching funds, have provided housing rehabilitation, replacement housing construction, water and sewer upgrades, and relocation assistance for local communities.

York County Housing and Neighborhood Revitalization Division is currently working on a multi-phase CDBG rehabilitation project in the Carver Gardens neighborhood. Thirty-nine homes were rehabilitated in the first two phases of the project, and another three were demolished and rebuilt. Fifteen homes are scheduled to be rehabilitated in Phase III.

1 **Indoor Plumbing Rehabilitation Program (IPR)**
2

3 The Indoor Plumbing Rehabilitation Program (IPR) provides zero-interest, forgivable loans for the installation
4 of indoor plumbing to owners of substandard housing, which is defined as a home where indoor plumbing
5 does not exist or where the septic system has failed. The program may also provide for general rehabilitation
6 or accessibility improvements to homes occupied by persons with disabilities.
7

8 **First Time Homebuyers Assistance (Down Payment/Closing Cost)**
9

10 The HOME Down Payment and Closing Cost Program provides closing cost and/or down payment loans of up
11 to \$10,000 to qualified first-time home buyers who want to purchase a new or existing home in the County.
12 The buyer contribution is 1% of sales price, and if the homeowner sells, transfers, leases, deeds or conveys all
13 or part of the property or any interest within five years from the date of closing, then the note is in default. If
14 default has not occurred after five years, the homeowner is under no obligation to repay any sums due and
15 the note is cancelled. In order to qualify, applicants must have a household income no higher than 80% of the
16 area median income based on household size and must have completed a First-Time Home buyer Education
17 Class approved by Virginia Housing (formerly the Virginia Housing and Development Authority, or VHDA).
18

19 **Emergency Home & Accessibility Repair Program (EHARP)**
20

21 The Emergency Home and Accessibility Repair Program (Rehabilitation Program) was established by the
22 Board of Supervisors in 1988. This program provides grant funds to eligible low-income families to remove
23 urgent emergency health and safety hazards. Funds can also be used to provide wheelchair ramps or other
24 accessibility improvements.
25

26 **Housing Choice Voucher Program (HCVP)**
27

28 The Housing Choice Voucher Program (HCVP) also known as Section 8, provides rental assistance to qualified
29 lower income individuals and families, including people with disabilities and senior citizens. Virginia Housing
30 distributes the federal dollars to localities, including York County. Voucher holders pay a percentage of their
31 monthly income toward the rent, with the balance paid by the program directly to the participating private
32 landlords. The County’s Division of Housing and Neighborhood Revitalization maintains a waiting list for the
33 Housing Choice Voucher Program.
34

35 **Tax Relief for the Elderly and Disabled Program**
36

37 York County offers a real estate tax relief program for lower-income homeowners who are at least 65 years
38 old and/or permanently disabled. Administered by the Commissioner of the Revenue’s Office, this program
39 exempts, in whole or in part, the tax on these individuals’ real estate or mobile home, provided that they
40 meet certain income and wealth limits and reside on the property.
41

42 **Indoor Plumbing Rehabilitation Program (IPR)**
43

44 The Utility Connection Fee Assistance Program assists low-income homeowners residing in the County’s
45 Utility Extension Project service areas with water and sewer connection fee costs based on need and
46 eligibility.
47

48 **Low-Income Housing Tax Credit (LIHTC) Program**
49

50 The Low-Income Housing Tax Credit (LIHTC) Program is a federal program administered in Virginia by
51 Virginia Housing. The LIHTC Program was enacted by Congress to encourage new construction and
52 rehabilitation of rental housing for low-income households. In so doing, Congress recognized that a

1 private sector developer may not receive enough rental income from a low-income housing project to 1)
2 cover the costs of developing and operating the project, and 2) provide a return to investors sufficient to
3 attract the equity investment needed for development. To spur investment, Congress authorized the
4 states to allocate tax credits to qualifying housing projects. The developers typically sell the credits to
5 private investors, who use the tax credits to offset taxes otherwise owed on their tax returns. The money
6 private investors pay for the credits is paid into the projects as equity financing, which is used to fill the
7 gap between the development costs for a project and the non-tax credit financing sources, such as
8 mortgages, that could be expected to be repaid from rental income. Once projects have been placed in
9 service, state agencies are also responsible for monitoring the projects for compliance with federal
10 requirements concerning household income, rents, and project habitability. Prospective residents are
11 required to meet certain prescribed maximum income thresholds. There are five housing developments in
12 the County that utilize LIHTC financing and a sixth that has been approved but has not yet been developed.

13
14 **USDA Direct Home Loan**

15
16 Also known as Section 502 Direct Loan Program, the USDA Direct Home Loan Program helps low-income
17 applicants obtain decent, safe, and sanitary housing in eligible areas by providing payment assistance to
18 increase an applicant's repayment ability. Payment assistance is a type of subsidy that reduces the
19 mortgage payment for a short time. There is typically no down payment required, and payment assistance
20 can reduce the interest rate to as low as 1%. The payback period is up to 33 years, or 38 years for very
21 low-income applicants who cannot afford the 33-year loan term

22
23 **USDA Single Family Housing Repair Loans and Grants**

24
25 This program, also known as the Section 504 Home Repair program, provides loans to very low-income
26 homeowners to repair, improved or modernize their homes or grants to elderly very low-income
27 homeowners to remove health and safety hazards. Loans can be repaid over 20 years and have a fixed
28 interest rate of 1%. Maximum loan amount is \$20,000 and maximum grant is \$7,500. Loans and grants
29 can be combined for a maximum of \$27,500 in assistance.

30
31
32 **PLANNING ISSUES FOR THE FUTURE**

33
34 If home construction continues at its current pace, the future will bring continued residential development
35 to York County for at least the next fifteen to twenty years. According to the build-out analysis conducted
36 for this Plan, approximately 5,040 additional housing units can potentially be built in the County – 2,420
37 in the upper County and 2,620 in the lower County – based on the amount of undeveloped land, its current
38 zoning (which in most cases mirrors the land use designations in this Plan), and the presence of
39 environmental or other development constraints. The net population increase associated with these
40 units, based on assumptions regarding household sizes and the percentage of vacant housing units, is
41 estimated to be 11,400 residents – 5,550 in the upper County and 5,850 in the lower County. This would
42 result in a total of approximately 34,500 housing units and 82,500 residents at full build-out. It should be
43 noted, however, that full build-out would mean the County has reached the point where there are no
44 residentially zoned parcels that are vacant and none that can be subdivided into two lots or more. As such,
45 it is really a hypothetical concept that will likely never be achieved.

46
47 As documented in the Demographic Profile and Projections chapter, York County has always been known as
48 a desirable place to live and raise a family. This identity is reflected in a housing stock that is dominated by
49 single-family detached homes that offer yards and plenty of space and are ideal for families with children.
50 This does not mean that other types of housing – townhouses, apartments, condominiums – have no role to
51 play in meeting the County's future housing needs. A diverse housing stock with a range of housing types,
52 sizes, densities, and prices is necessary to meet the needs of a diverse and changing population – from young
53 singles and couples who are just starting their careers to older residents who are retired or approaching

1 retirement. Multi-family and single-family attached housing are particularly attractive both to young couples
 2 with limited buying power and lesser space needs and to older residents whose children have grown and
 3 moved away. Those in the middle of the age spectrum – couples with children – are attracted to single-family
 4 detached homes. When it comes to the housing market, the phrase “one size fits all” does not apply.
 5

6 Housing construction in recent years has brought increased diversity to the housing stock, and this trend will
 7 likely continue over the next five to ten years as housing units that are currently in the development pipeline
 8 are built. As of the writing of this Plan, there are approximately 3,300 future housing units in residential
 9 developments that are either 1) approved and under construction, 2) under review but not yet approved for
 10 construction, or 3) approved by the Board of Supervisors through the rezoning or Special Use Permit process
 11 but not yet under detailed plan review. As shown in **Table 4** below, multi-family and single-family attached
 12 homes account for almost half of these “pipeline units,” while single-family detached homes make up slightly
 13 more than half. Age-restricted housing accounts for more than a third of the housing units in the pipeline and
 14 61% of the rental apartments.

FUTURE HOUSING UNITS IN THE DEVELOPMENT PIPELINE (As of March 1, 2022)					
	Single-Family detached	Single-Family Attached	Rental Apartments	Condominiums	TOTAL
Upper County	1,006 (157)	119 (56)	700 (298)	0	1,825 (511)
Lower County	587 (151)	72	541 (457)	98 (44)	1,298 (652)
Grand Total	1,593 (308)	191 (56)	1,241 (755)	98 (44)	3,123 (1,163)

Note: Numbers in parentheses represent age-restricted senior housing units.

Table 4

15 The addition of these future units to the existing housing stock will result in a slight shift in the overall mix of
 16 housing types, reducing the proportion of single-family detached homes from 64% to 61% of the total and
 17 increasing rental apartments from 11% to 15%. Single-family attached units and condominiums will remain
 18 at 11% and 3% of the total respectively. In the long term, however, after all of the housing units currently
 19 in the pipeline have been built, the trend will be reversed, and new residential development will be almost
 20 exclusively single-family detached. This is because the remaining 1,740 future housing units that are not yet
 21 in the pipeline will be on land that is designated for single-family detached housing. At some point in the
 22 future, the County will need to reconsider some of the land use designations if it wants to continue to provide
 23 a diversity of housing opportunities to achieve balanced population growth.
 24
 25

Source: York County Planning Division

Figure 6

1 **Housing Affordability**
2

3 Related to the issue of housing diversity is the issue of housing affordability. Having a variety of housing
4 types provides for a range of housing prices and rents. As noted earlier, Census data indicates that in
5 comparison with most neighboring localities, York County has a lower proportion of households that are
6 spending more than 30% of their household income on housing, which is largely a reflection of the
7 County’s relative affluence. What these statistics do not capture is how many people would like to live in
8 the County but are not able to because they cannot find housing they can afford. It is probably not a
9 coincidence that York County, which has one of the highest median house values on the Peninsula, has
10 proportionally fewer residents in their twenties and early thirties than either the Virginia Beach metro
11 area or the state of Virginia as a whole.
12

13 The Comprehensive Plan citizen survey found that nearly two-thirds (65%) of County residents feel it is
14 important to focus on encouraging and attracting balanced population growth, such as younger families,
15 and almost 40% feel it is *very* important. Twelve percent feel this is not an important goal, and 23% have
16 no opinion. It is worth noting that the citizen survey also found that two-thirds of County residents
17 consider it important to focus on encouraging the development of so-called “workforce housing” – that
18 is, housing that is affordable to people who work in and serve the community in some capacity, such as
19 teachers, firefighters, law enforcement personnel, as well as health care, service, and retail workers.
20 Forty-five percent consider it *very* important while 17% do not consider it to be important and another
21 17% have no opinion. If the County is going to attract younger families and entry-level workers, there
22 need to be housing opportunities for them.
23

24 Section 15.2-2223.D of the *Code of Virginia* requires that comprehensive plans “include the designation
25 of areas and implementation of measures for the construction, rehabilitation and maintenance of afford-
26 able housing, which is sufficient to meet the current and future needs of residents of all levels of income
27 in the locality while considering the current and future needs of the planning district within which the
28 locality is situated.” As a guideline, Section 15.2-2201 of the state code defines affordable housing as
29 “housing that is affordable to households with incomes at or below the area median income, provided
30 that the occupant pays no more than thirty percent of his gross income for gross housing costs, including
31 utilities.” The area median income – that is, the median household income for the Virginia Beach-Norfolk-
32 Newport News Metropolitan Statistical Area (MSA) – is \$84,500 as of 2021, according to the U.S. Depart-
33 ment of Housing and Urban Development (HUD). HUD also establishes income thresholds for “low-in-
34 come” (80% of the median, or \$67,600), “very low-income” (50% of the median, or \$42,250), and “ex-
35 tremely low-income” (approximately 30% of the median, or \$26,500) families.
36

37 For this Plan, an analysis of recent home sales in the County was conducted in an effort to quantify the
38 extent to which the housing market is meeting the needs of homebuyers with incomes at or below the
39 median for the Virginia Beach MSA. The maximum affordable home sale price for each income category
40 was calculated based on the 30% ratio of housing cost to household income and an assumed 30-year fixed
41 rate mortgage with a 5% down payment and a 3.75% interest rate. Under these assumptions, households
42 earning between 80% and 100% of the area median income can afford homes ranging from a minimum of
43 \$318,000 to a maximum of \$398,000. For those earning between 50% and 80% of the area median, the
44 affordability range is \$195,000 to \$318,000. The range of affordability for those households with incomes
45 between about 30% and 50% of the median is \$120,000 to \$195,600.
46

47 Once the affordable housing prices were calculated for each of these four income groups, the number of
48 York County homes sold in 2020 and 2021 (through September 21, 2021) that were affordable to
49 households in each income category was then determined. All types of owner-occupied housing was
50 included in this analysis, including single-family detached homes, townhouses, duplexes, multiplexes, and
51 condominiums. The results are shown in **Table 5** and depicted graphically in **Figure 7**. What they show is
52 that according to this analysis, York County appears to have an adequate amount of housing that is
53 affordable to median-income and low-income households, as HUD defines these terms. Of the 2,503 homes

1 sold in the County, 69% – and 86% of the *new* homes sold – were affordable to the 50% of households
 2 with incomes at or below the median, and almost half – 46.8% – were affordable to “low-income”
 3 households with incomes at or below 80% of the median. While townhouses and condos made up a fairly
 4 large share (39%) of these “affordable” homes, the majority were single-family detached. This is largely
 5 due to two new housing developments – Arbordale, located on Bulifants Boulevard, and Marquis Hills –
 6 located on Marquis Parkway behind the Marquis shopping center – which together account for more than
 7 three-quarters (78%) of the affordable single-family detached homes sold. Both projects are higher-
 8 density developments that resulted from rezoning applications approved by the Board of Supervisors.
 9

2020-21 Home Sales by HUD-Defined Income Categories					
Household Income Threshold	Maximum Household Income	Maximum Affordable Home Price	Maximum Affordable Monthly Rent	Home Sales in Income Range	
				Number	Percent
Median	\$84,500	\$398,000	\$2,113	554	22.1%
Low (80% of Median)	\$67,600	\$318,000	\$1,690	911	36.4%
Very Low (50% of Median)	\$42,250	\$195,600	\$1,056	254	10.2%
Extremely Low	\$26,500	\$120,000	\$663	6	0.2%

Sources: U.S. Department of Housing and Urban Development (income levels), York County land records. Maximum Affordable Home Prices calculated by the York County Planning Division based on 30% of income spent on housing and an assumed 30-year mortgage with a 5% down payment and a 3.75% interest rate.

17
18

With regard to the “workforce housing” issue mentioned earlier, the analysis found that one out of six home sales in 2020 and 2021 were affordable to entry-level teachers, firefighters, and deputy sheriffs in the County. The minimum annual salary for these positions is in the \$44,000-\$48,000 range, which, based on the interest rate and terms assumptions noted above, equates to a maximum affordable house price of

1 approximately \$223,000.² There were 416 homes sold during the study period – 16.6% of the total – that
 2 were affordable to people in this income range.
 3

4 For “very low-income” households earning between \$26,500 and \$42,500, the percentage of affordable
 5 home sales is somewhat lower at 10.4%. There are roughly 2,700 homes – about 10% of the housing stock
 6 – with assessed values in this category. Almost half of these are townhouses, condos, and multiplexes
 7 built in the 1980s and 1990s (for example, York Crossing, Williamsburg Commons condos, Wood Towne
 8 Quarters, Eagle Sound, Grafton Woods, and others). The average age of these units is 32 years. Most of
 9 the remaining homes in this category, however, are older single-family detached homes that were built
 10 at least fifty years ago (63 years, on average). Although these homes are scattered around the County,
 11 many are clustered in older small-lot subdivisions such as Middletowne Farms, Carver Gardens, York
 12 Terrace, Hickory Hill, the Hubbard Lane area, as well as Springfield Road, Barlow and Skimino Roads, Cary’s
 13 Chapel Road, and the Lackey area. This supply of moderate-income housing plays an important role in
 14 addressing the need for affordable housing in the County, and maintaining its viability should be a priority
 15 Through public utility extension projects, Community Development Block Grants (CDBG), and other
 16 programs, the County has invested in neighborhood revitalization initiatives that have made a positive
 17 difference in the lives of low and moderate-income citizens. A recent example of this strategy in action is
 18 Carver Gardens, where, as noted earlier, CDBG funds were used to rehabilitate or reconstruct 57 homes.
 19 The County is currently seeking CDBG funding to address housing rehabilitation needs in the Cary’s Chapel
 20 Road area, where there are many older homes that have been in the same family for generations and
 21 need assistance to be brought into conformance with federal Housing Quality Standards.
 22

York County Renter-Occupied Housing Units by Contract Rent

Figure 8

23 Not surprisingly, it is in the “extremely low-income” category – households earning less than \$26,500
 24 annually – where the shortage of affordable housing opportunities exists. It is unlikely in today’s market that
 25 new housing can be built in this price range without some form of subsidy, and it should be recognized that
 26 it is not practical to provide home-ownership possibilities for every income level. Census Bureau survey data
 27 indicates that roughly 2,200 households in the County fall in this income range while there are only about
 28 440 rental units affordable to households in the extremely low income category (i.e., monthly rents at or
 29
 30
 31

² Minimum starting salaries for Fiscal Year 2020-21 are \$43,611 for Firefighters and Deputy Sheriffs, and range from \$43,715 for full-time teachers with a bachelor’s degree to \$48,035 for those with a master’s degree.

1 below \$663). Home ownership opportunities are much more limited for these households; there were only
2 six affordable home sales between 2020 and 2021, and according to County real estate assessment data,
3 there are only 129 homes – mobile home parks excluded – that are affordable to this group, most of them
4 located in the areas mentioned earlier where housing is affordable to “very low income” households. Most
5 households in the “extremely low income” category would likely be eligible for the previously mentioned
6 Housing Choice Voucher Program and other federal and state income assistance programs.
7

8 It is important to recognize that interest rates have a significant effect on housing affordability. This
9 affordability analysis was conducted at a time when mortgage rates were at historically low levels, making
10 housing much more affordable to many households with incomes at or below the median. As such, this
11 analysis is basically a snapshot in time, and if interest rates continue to rise as they did in early 2022, the
12 affordability picture will be far less positive.
13

14 Developers and housing advocates commonly cite government regulation as a barrier to the production of
15 affordable housing in the United States. Examples include restrictions on new residential development such
16 as large-lot (or low-density) zoning, minimum house size or floor area requirements, excessive lot width
17 and building setback requirements, and cash proffer “guidelines” for residential rezonings. These barriers
18 do not exist in York County, with the exception of low-density zoning. As stated in the Land Use element,
19 land designated for Low Density Residential development makes up the largest share of undeveloped land
20 in the County – more than twice the combined amount of land designated for Medium and High Density
21 Residential development.
22

23 Housing density has an effect on housing prices; as a general rule, the more homes per acre in a given
24 development, the lower the home prices tend to be. Higher densities enable the developer to spread the
25 cost of infrastructure – streets, utilities, and stormwater management facilities – and community amenities
26 over a higher number of lots, thereby reducing the development cost per unit. Furthermore, smaller homes
27 on smaller lots typically command lower prices. For example, roughly 30% of the nearly 600 non-waterfront³
28 single-family detached homes built in the County over the past five years were zoned RR (Rural Residential),
29 which corresponds with the Low Density Residential land use designation and provides for a maximum
30 density of one unit per acre. The average value of those homes is about \$562,000. Only fourteen of those
31 124 homes – 11.3% – were affordable to households with incomes at or below 80% of the median. By
32 contrast, the previously mentioned Arbordale and Marquis Hills developments, which accounted for most
33 of the remaining single-family detached home sales during that same period, have gross densities of 2.6 and
34 2.7 units per acre respectively and net densities – which are based on net developable acreage – of 4.2 and
35 6.7 units per acre respectively. For the two developments combined, the average home value is
36 approximately \$317,000, and more than a third – 37.4% – are affordable to households with incomes at or
37 below the median.
38

39 As noted, townhouses, duplexes, condominiums and higher-density single-family detached housing have
40 improved housing affordability in the County. However, as the availability of vacant land zoned for these
41 types of housing declines, it will be increasingly difficult for the County to achieve its affordability goals.
42 Based on the housing type, density, and market orientation of residential projects that are currently in
43 the pipeline, there appear to be enough future housing units that are likely to be affordable to households
44 in the low- to median-income range to meet market demand in the short to medium term. In the long
45 term, however, when all the projects in the pipeline have been completed, the opportunity for moderately
46 priced housing decreases considerably. Roughly three-quarters of the undeveloped residential land that
47 is not already planned or approved for development is designated Low Density Residential, while only
48 about 7.5% is designated High Density Residential and basically none is designated Multi-Family
49 Residential. Without more flexibility with regard to housing densities, the County will face a growing

³ Waterfront homes are excluded from this analysis because they skew the results. When waterfront homes are included, the average value of single-family detached homes built in the past five years on RR-zoned land increases to \$594,000.

1 shortage of housing that is affordable to households with incomes below the median. One challenge will
2 be the general opposition to higher densities that was expressed in the Comprehensive Plan citizen survey,
3 which showed that even though County residents support the concept of “workforce housing,” only a
4 third support the idea of increasing the permitted number of homes per acre to achieve it while 43%
5 oppose this strategy.
6

7 Two zoning tools that are intended to provide additional flexibility in the regulation of land use and
8 development are conditional zoning and Planned Development zoning. Conditional zoning has been in place
9 in York County since 1987. It is a process in which a property owner or developer submits an application to
10 rezone property subject to voluntarily proffered conditions (commonly referred to as “proffers”) that
11 typically relate to such things as architectural standards, construction of off-site improvements,
12 contributions of land or cash for schools or other public facilities, and similar items not otherwise required
13 under the normal plan approval process. In other localities, conditional rezoning has been used to help
14 address affordability concerns by limiting the sale prices or by guaranteeing that a certain percentage of the
15 units will be moderately priced. Developers can also proffer off-site improvements to mitigate the effects of
16 residential growth and housing density. In York County, developers have proffered school and fire station
17 sites, turn lanes, sidewalks, and cash payments for schools and recreational facilities in connection with
18 residential rezoning applications. It is important to emphasize that the County cannot require or even
19 suggest such proffers to a developer; the Code of Virginia requires that they be voluntarily proffered and
20 not imposed by the locality.
21

22 Proffers typically come into play with Planned Developments, of which there are two types in York County
23 – PDR (Planned Development-Residential) and PDMU (Planned Development-Mixed Use). As stated in the
24 Zoning Ordinance, the purpose of the Planned Development (PD) districts is to encourage a more efficient
25 use of land and public services by allowing a more flexible means of development than is otherwise
26 possible under typical lot-by-lot or cluster zoning restrictions. Establishing a PD requires a rezoning
27 process in which the developer submits a master plan for the proposed development and proposes
28 specific design parameters – e.g., open space, recreational amenities, minimum building setback and
29 separation standards, architectural standards, etc. – that, once approved by the Board of Supervisors,
30 become conditions of the PD zoning. As such, each PD is essentially its own zoning district unique unto
31 itself. Since most PDs typically involve an increase in density over what the existing zoning calls for, they
32 call for a certain amount of flexibility on the part of the Board of Supervisors.
33

34 The Arbordale, Marquis Hills, Bruton Glen, Endview Woods, Quail Hollow (Section 3), Sunset Meadows,
35 and Willow Lakes Planned Developments have previously been cited as examples of projects that have
36 improved housing affordability. In 2021 the Board approved another PD to convert an older, obsolete
37 motel on Merrimac Trail into a 125-unit apartment building with relatively small one- and two-bedroom
38 units at below-average rents targeted mainly toward younger members of the workforce in the 25 to 34
39 year-old age range. In this case, the Board demonstrated flexibility to deviate from the Comprehensive
40 Plan since the project involved the establishment of a residential use on land that was designated General
41 Business in the Comprehensive Plan.
42

43 In 2007, the County’s Zoning Ordinance was amended to allow a new kind of Planned Development – the
44 PDMU – to provide opportunities for developments containing an integrated, comprehensively planned
45 and designed mix of residential (and different types of residential), retail, office, and other appropriate
46 uses. Since then, four mixed-use developments have been approved in the County: Nelson’s Grant and
47 Yorktown Crescent, both in the vicinity of the intersection of Route 17 and Ft. Eustis Boulevard,
48 Commonwealth Green, located at the end of Commonwealth Drive along the Newport News city line, and
49 Kelton Station on Lightfoot Road. To date, only Nelson’s Grant, which is a fairly compact development of
50 townhouses and condos within walking distance of various shops and restaurants, can truly be considered
51 a mixed-use development. The other three have yet to provide any commercial uses and at this point are
52 strictly residential developments.
53

To fulfill the vision of mixed-use developments as places where people can live, work, and play will require a sincere, demonstrated commitment on the part of developers to both the residential and commercial components. This will be difficult to accomplish at a time when market demand is much greater for high-density housing than for commercial development. Any future mixed-use development proposals in the County will require close scrutiny to ensure that the PDMU ordinance achieves its objectives and is not used as a mechanism for obtaining de facto residential rezonings.

Senior Housing

One segment of the housing market that has drawn special attention in recent years is the senior population. The dramatic increase in the number of older Americans that began in 2011 as the first members of the baby boom generation turned 65 will affect the housing market for years to come. In response to this trend, the Board of Supervisors has approved fifteen age-restricted housing developments with a combined total of almost 2,000 units, slightly more than a third of which have been built so far. These are listed in **Table 6** below, which does not include two projects – Rainbrook Villas and Villas at Shady Banks, with a combined total of 248 units – that are designed for and largely targeted toward “active seniors” but are not age-restricted.

SENIOR HOUSING PROJECTS IN YORK COUNTY			
EXISTING			
Project Name	Address/Location	Type	Units
Arbors at Towne Park	101 Roscoe Crossing	Independent Living	130
Colonial Harbor	2405 Ft. Eustis Boulevard	Congregate Care	118

TOTAL			1,252
GRAND TOTAL			1,976

Table 6

Age-restricted housing for seniors has both advantages and disadvantages. Among the benefits touted by developers of senior housing is the fact that they have no impact on school enrollment and therefore, have a positive net fiscal impact on the County. It should be noted, however, that although there is no *direct* impact on school enrollment, there is quite likely an *indirect* impact as empty nesters moving into a senior housing development sell their homes to younger families with school-age children. The disproportionate impact of senior housing on the County’s emergency medical services (EMS) is also a drawback that has fiscal impacts that are difficult to quantify. The incremental impact of each senior housing project may be manageable, but over time the cumulative impacts of multiple projects will likely generate, or at least contribute to, the need for costly fire and EMS equipment and apparatus

1 Another concern regarding senior housing developments is the potential for such projects to be converted
2 into general market housing in response to market conditions. This has already occurred in the County. The
3 Reserve at Williamsburg Planned Development on Mooretown Road was approved in 2006 as a 459-unit
4 age-restricted housing development. The first phase of that project – the 120-unit Verena Apartments – was
5 completed in 2010, after which construction stalled. In 2013, the developer requested that the Board of
6 Supervisors to remove the age restriction from the remainder of the project, explaining that the market for
7 “for-sale senior housing has been difficult and the rates of sales impacted by the inability of seniors to sell
8 their existing homes, slowing down the rate of sales for senior only communities.” As part of this request,
9 which was ultimately approved, the developer voluntarily proffered to make a per-unit cash payment to the
10 County to address the school impacts associated with removing the age restriction.

11
12 While many older Americans with limited retirement income and diminishing strength may have difficulty
13 coping with housing expenses and maintenance demands, many others are physically and financially able to
14 remain in homes where they have lived for many years. Nationwide survey data suggests that most seniors
15 would prefer to “age in place,” either in the homes where they have lived for many years or in another non-
16 institutional setting in the community, but often they are unable because they cannot afford to upgrade
17 their homes with senior-accessible housing features such as first-floor master bedrooms, no-step entrances,
18 and wide hallways.⁴ Such residents may benefit from the County’s Elderly and Disabled Tax Relief Program,
19 which helps older citizens who meet certain income criteria to remain in their homes by exempting their
20 real estate taxes, in full or in part.

21
22 Another option for assisting seniors who want to “age in place” is the accessory apartment. Sometimes
23 referred to as ADUs (Accessory Dwelling Units), in-law suites, or granny flats, accessory apartments are
24 independent living units developed in connection with an existing single-family detached home. They can
25 be within or attached to the primary dwelling, or they can be in a detached accessory building. Accessory
26 apartments provide opportunities for households with an older relative who needs some degree of
27 assistance to remain independent. They also provide an opportunity for elderly persons to remain in their
28 homes with a live-in family member, allowing each of them to maintain a certain level of privacy and
29 independence. York County permits accessory apartments as a matter of right in most single-family
30 residential zoning districts, but a Special Use Permit is required for larger units and in certain other instances.

31
32 **Housing Rehabilitation**

33
34 Although York County’s housing stock is relatively young, there are about 4,500 housing units that were built
35 before 1970 and are now over fifty years old. As these dwellings continue to age, so does the likelihood that
36 rehabilitation, repair, and accessibility upgrades will be needed. The County’s Department of Community
37 Services has sought out and administered federal, state, local, and non-profit funding opportunities for re-
38 pair and rehabilitation of existing housing units and the County will need to continue to support and use all
39 available private and public rehabilitation assistance opportunities to assist in maintaining the physical
40 safety of their properties and, commensurately, the quality and character of their surroundings. These initi-
41 atives provide multiple benefits in terms of maintaining the stock of affordable housing for low- and moder-
42 ate-income households, helping seniors to remain in their homes, protecting property values, and preserv-
43 ing the overall quality of life in the County.

44
45
46 **GOAL, OBJECTIVES, AND IMPLEMENTATION STRATEGIES**

47
48 **Goal: Ensure that decent, safe, sanitary, and affordable housing is available to all County**
49 **residents.**

50

⁴ Nicholas Farber, JD, and Douglas Shinkle: *Aging in Place: A State Survey of Livability Policies and Practices* (A Research Report by the National Conference of State Legislatures and the AARP Public Policy Institute), December 2011

Objective 1: Provide for a range of housing types and densities corresponding to the needs of a diverse population while maintaining the predominance of single-family detached housing.

1. Use the Comprehensive Plan as a general guide for future development in making zoning decisions and evaluating residential development proposals.

The Comprehensive Plan is a general plan for the future development of the County; it is not a blueprint. Sometimes there are good reasons to deviate from the Comprehensive Plan when making zoning decisions. When a proposed residential development comes before present and future policymakers, it should be evaluated those based not just on the land use designation in the Comprehensive Plan but also on the policies set forth in the Plan as well as the totality of circumstances surrounding that proposal.

2. Establish zoning classifications and densities that provide mainly for single-family detached homes while ensuring a variety of housing types.

York County has always been and should always remain an attractive place for families to raise their children. As such, the predominance of single-family detached homes should continue. Still, the County should respond to the needs of the housing market, which reflects the increased diversity of household types in the United States. Survey data from the Census Bureau indicates that nationwide, married-couple families now represent less than half of all households, while non-family households (persons living alone and unmarried couples without children) now represent almost a third. Furthermore, multi-family and single-family attached housing are particularly attractive to both younger residents and the growing senior population, but it is likely as the County approaches the 2040 horizon of this Plan, there will be virtually no opportunity for development of these types of housing. The County will need to consider changes to its zoning and land use designations to ensure a mix of housing that meets the needs of the entire housing market and not just one segment.

3. Provide opportunities for developments that contain a mix of residential and compatible commercial uses in a single cohesively designed, walkable environment in appropriate areas.

Implementing the mixed-use concept in York County has been a challenge, but that does not mean the concept has no value. Future proposals for mixed-use development should be held to a high level of scrutiny to ensure that the intent of providing walkable developments in which people can live, work and play will be achieved. Similarly, the Planned Development-Mixed Use provisions of the Zoning Ordinance should be reevaluated to determine what changes are necessary to prevent these provisions from resulting developments that are entirely residential in nature, either by circumstance or by design.

Objective 2: Provide opportunities for housing that is affordable to households with incomes at or below the median for the Virginia Beach-Norfolk-Newport News Metropolitan Statistical Area.

1. Consider the impact of legislative zoning decisions (i.e., rezoning and Special Use Permit applications) on the availability of affordable housing for moderate-income households.

Providing for a range of housing types and densities increases the availability of moderately-priced housing. As approved future housing units that are currently in the development pipeline are built and most of the remaining land is designated for low-density housing, the County will face a growing challenge to achieve the objective of housing affordability – and growing pressure from the development community to address the needs of the housing market. In evaluating development proposals, policymakers looking to find a balance between competing objectives, as in the tradeoff that often exists between density and affordability, should recognize that affordable or “workforce” housing, is a social good that benefits the entire community.

- 1 2. Invest in public infrastructure improvements (e.g., sidewalks, utilities, streetlights, landscaping, road
2 improvements) and housing rehabilitation and repair initiatives in older residential areas.
3

4 Much of the County existing stock of moderately-priced housing is located in residential areas that
5 were developed fifty, sixty, and even seventy years ago and would benefit from public investments in
6 their revitalization. Community Development Block Grants (CDBG) and other funding programs have
7 been successfully utilized in Carver Gardens, Lackey, and elsewhere. Additional areas that could be
8 potentially targeted for such efforts include but are not limited Cary’s Chapel Road, the Hubbard
9 Lane/Penniman Road/York Terrace area, Springfield Road, Middletowne Farms, Hickory Hill, and Bar-
10 low Road.
11

- 12 3. Periodically revise the Tax Relief for Elderly and Disabled Program requirements to ensure that the
13 income criteria account for long-term inflation.
14

15 The income thresholds by which eligibility for this tax relief program is determined were last revised
16 in 2004. Based on Consumer Price Index figures published by the U.S. Bureau of Labor Statistics, the
17 cost of living in the United States has risen 53.4% since then. While it would not be necessary or prac-
18 tical to make such adjustments on an annual basis, regular updates every five years or so would ensure
19 that the program is truly reaching those it is intended to reach.
20

21 **Objective 3: Ensure the safety, quality, and viability of the existing housing stock.**
22

- 23 1. Provide assistance to lower income residents seeking to repair and rehabilitate their homes.
24

25 Every County resident should have a decent place to live, but according to the Census Bureau’s Amer-
26 ican Community Survey, there are still housing units in the County that lack complete plumbing or
27 kitchen facilities or house heating fuel. Through the County’s Housing and Neighborhood Revitaliza-
28 tion Division, local funds have been successfully used to leverage federal and state dollars to help low-
29 income citizens with their housing needs. In addition to addressing housing safety issues, this strategy
30 also supports the objective of housing affordability.
31

- 32 2. Participate in housing accessibility upgrades to seniors who need assistance to remain in their homes.
33

34 The County has approved almost 2,000 housing units – mostly of the multi-family or single-family
35 attached variety – designed for and limited to seniors, but many older residents would prefer to re-
36 main in the single-family detached homes where they have lived for many years, raised their children,
37 and formed friendships with their neighbors. The County can help these seniors to achieve that goal
38 by providing assistance, financial or otherwise, to upgrade their homes with “universal design” fea-
39 tures – such as handicap ramps, lever handles on doors, bathrooms with grab bars and raised com-
40 modes, widened entrance doors, and easily reachable light switches, just to name a few – that are
41 intended to make them more livable for older residents. For example, the Emergency Home and Ac-
42 cessibility Repair Program, administered by the County’s Housing and Neighborhood Revitalization Divi-
43 sion, provides assistance with handicap ramps and other accessibility upgrades.
