Subject: [EXTERNAL] Dominion Energy Newsroom - Buried power lines are reducing storm-related outages for Dominion Energy Virginia customers

Good morning,

I hope you are doing well.

Below is a press release regarding our Strategic Underground Program. Please feel free to share with your constituents.

Please contact me if you have any questions about our Strategic Underground Program.

Thank you,

Crystal B. Bright
External Affairs Manager

Buried power lines are reducing storm-related outages for Dominion Energy Virginia customers

- *The company finished burying 2,500 miles of the most outage-prone power lines ahead of the hurricane season*
- *Average outage time for customers served by buried power lines has fallen from 11 hours to 2 minutes*
- *Customers are reminded how to prepare for hurricane season*

RICHMOND, Va.--(BUSINESS WIRE)-- As the Atlantic hurricane season begins, Dominion Energy has finished burying more than 2,500 miles of the most outage-prone power lines in Virginia. Burying these lines significantly reduces power outages and restoration time during storms.

The work is part of the company's Strategic Underground Program, which was launched in 2014. The program targets areas with the most outages from fallen trees, the leading

cause of power outages in Virginia. The company plans to bury thousands more miles in the coming years.

The results so far are very positive. The average outage time for customers with buried lines has fallen from 11 hours to just 2 minutes. With fewer outages in these areas, crews can more quickly restore power for other customers. In many areas, average restoration time for all customers has been cut in half during major storms such as tropical storms and hurricanes.

“We’re focused on delivering more value for our customers every day,” said Ed Baine, President of Utility Operations and Dominion Energy Virginia. “It’s personal for us because we know power is important for everything in our customers’ daily lives. We’ve made a lot of progress in the most outage-prone areas, and our customers are seeing real results. They’re experiencing fewer storm-related outages, and their power is being restored sooner. The results will continue getting better as we make more progress in the years to come.”

The company’s Mainfeeder Hardening program is further reducing storm-related power outages by replacing thousands of older utility poles and cross arms across the company’s system. Average outage time for customers served by hardened mainfeeder lines has fallen by 30%.

Since 2019, the program has replaced more than 8,000 utility poles and 9,500 cross arms along more than 265 miles of mainfeeder lines, with the goal of reaching 1,000 miles by 2030.

The Atlantic hurricane season runs from June 1 through November 30 and is expected to be active. Dominion Energy encourages customers to prepare with the following tips:

- Download the Dominion Energy mobile app to report outages and track restoration during storms.
- Stay at least 30 feet away from downed power lines and report them by calling 866-DOM-HELP.
- Fully charge electronic devices before storms and consider portable battery packs.
- Get generators serviced before storm season and ensure proper ventilation.
- Stock up on essentials like water, non-perishable food, flashlights, and medications.
- More preparedness tips are available [here](#).
